In today's world, without the science of evolution there would be no science. Written for both the scientifically-minded as well as those who are not familiar with science at all, this book details the facts of the science of evolution. In one engrossing volume Ardea Skybreak looks at the diversity and complexity of life on this planet and how all life, including humans, evolved. She examines the many different lines of mutually reinforcing evidence that support and confirm the biological theory of evolution. At the same time, Skybreak dissects the myth of Creationism and the lies behind the thinly-veiled religiosity of Intelligent Design. There's urgency in this book. It comes at a time when evolution—and the very definition of science—is under concerted attack by religious fundamentalists, with backing from the highest levels of government. The reader will come away with a deepened appreciation of the beauty and wonders of nature, as well as an understanding of the basic scientific facts of evolution and a clear sense of why science and a scientific method make it possible to determine what's real—and why knowing what's real profoundly matters.

"...well written, concise, and comprehensive...accessible to the general reader and uncompromising in its logic and accuracy in presenting scientific concepts... give your students Ardea Skybreak's book and watch their understanding grow."

***Kevin Padian**, Professor of Integrative Biology, University of California, Berkeley; Curator, Museum of Paleontology, University of California, Berkeley*

"...of tremendous benefit to many, especially those in the teaching profession where there are frequent opportunities to defend science against the ridiculous assertions by religious zealots and fundamentalists."

***Richard Leakey**, Paleoanthropologist, former Director of Kenya's National Museums, former Director of the Kenya Wildlife Service*

"...clearly explains the overwhelming evidence for evolution and why it is scientific fact...Skybreak does an excellent job of educating and inspiring an interest in nature, science and evolution."

***David Seaborg**, Evolutionary Biologist, founder and President of the Foundation for Biological Conservation and Research, founder and President of the World Rainforest Fund*

"...very easy to read and understand...Information such as this is desperately needed especially here in the 'Bible Belt' South, where religious fundamentalism and creationism hit hardest."

From a high school student in Georgia

"I'm thoroughly enjoying and immensely intrigued by Ardea Skybreak's [book] on evolution."

"Ardea Skybreak breaks it all down in a way that I know brothers will be able to grasp to the fullest."
